

# CLEAN GREEN CERTIFICATION

Third-party Verified Environmental Performance for Commercial Laundry

CLEAN GREEN®

## What Clean Green Certification Means

Our facility is Clean Green certified by TRSA, the national association for linen, uniform and facility services. Clean Green verifies that our laundry meets stringent environmental efficiency standards, including reduced water consumption, energy conservation and waste minimization. All certification requirements are validated through independent, third-party auditing, ensuring transparency and credibility.

## Verified Environmental Practices

As a Clean Green certified provider, we demonstrate:

### Optimized Water Use

Lower gallons per pound through water reuse, recycling and high-efficiency wash-processes.

### Reduced Energy Consumption

Use of heat-reclaim systems, high-efficiency boilers and reduced hot-water demand.

### Lower Greenhouse Gas Impact

Improved fuel efficiency and lowered energy intensity of operations.

### Waste Reduction & Landfill Diversion

Reuse, repair and recycling programs that extend textile life.

### Third-party Monitoring of Conservation Metrics

Ongoing tracking of water and energy savings.

## Why Clean Green Matters to You

Choosing a Clean Green certified laundry supports your organization by helping you:

### Meet Sustainability and ESG Goals

Demonstrate responsible stewardship of water, energy and waste.

### Align with Procurement Requirements

Many RFPs now request documentation of environmental performance and verified conservation practices.

### Reduce Environmental Impact in Your Community

Lower resource use translates into reduced strain on local water and energy systems.

### Support Cost Effective, Environmentally Preferable Reusables

Reusable linens and garments significantly reduce landfill waste and frequently lower lifecycle cost.

# Reusables vs. Disposables

Clean Green supports the use of reusable textiles, which have a substantially smaller environmental footprint than disposables. TRSA is actively developing updated infographics and industry-wide statistics to help quantify these impacts for your reporting needs.

## Documentation available we can provide:

**Clean Green certification documents and audit verification**
